What's Up Is Down Run Instructions

Github Branch Instructions:

We have created a tag on the master branch called iterationTwo, to setup the repo and pull that specific version, follow the commands below. The github username tobastin has been granted access.
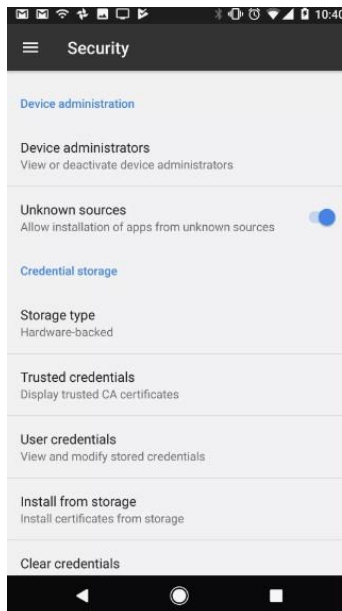

git clone https://github.com/adam360x/whats-up-is-down

cd whats-up-is-down git checkout tags/iterationTwo

You now are on our iterationTwo tag.

You will find the apk file in the main whats-up-is-down/What's Up Is Down folder.

Option 1: Load natively onto Android device

First, on the settings in your respective device, find the "Unknown sources" setting and make sure it is enabled as in the screenshot below.

Next, find the "file manager" app in your android library and download the apk from the github.

Find the downloaded APK, run, and enjoy playing What's Up Is Down!

Option 2:

Download the android emulator of your choice on your desktop/laptop, we recommend LDPlayer. Here is a link: https://www.ldplayer.net/

After installation, run, LDPlayer. Find the "What's Up Is Down" apk in the git repo, and simply drag it into your LDPlayer window. It will look like the below image. Click to run and enjoy playing What's Up Is Down!
